

THE ROLE OF AGRO INDUSTRIAL CLUSTERS IN INCLUSIVE AND SUSTAINABLE DEVELOPMENT

by

Chuma EZEDINMA Officer in Charge UNIDO Regional Office, Nigeria

March 2016

- 1. Introduction
- 2. The concept
- 3. Examples from around the world
- 4. Objectives and Goals
- 5. Developing Agro Industrial Clusters
- 6. Financing Agro Industries
- 7. Risks

Introduction

In Africa, government resources and capacities are limited and need to be used strategically.

Developing agro industrial clusters in Africa is a strategic approach to inclusive and sustainable development

To deliver effectively and efficiently in the global interest of inclusive employment and sustainable development requires **significant coordination** of efforts, resources and knowledge; and leveraging the core competences of key stakeholders namely:

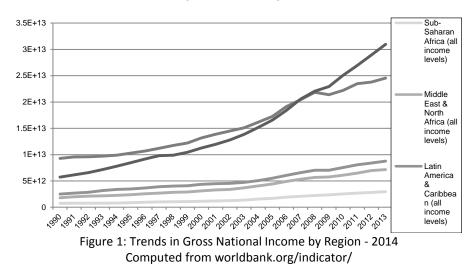

•government,

- development partners,
- private sector entrepreneurs and businesses

AFRICA's Growing Challenge - Population

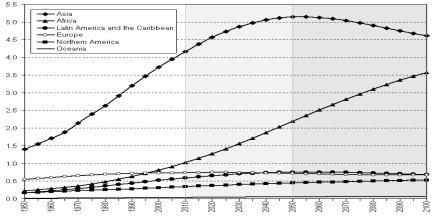

Figure 2: Global Population trend (Source: UN's World Population Prospects, 2014)

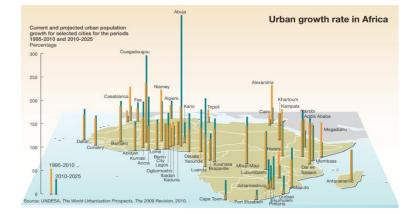

Figure 3: Changing urban population in some African Countries

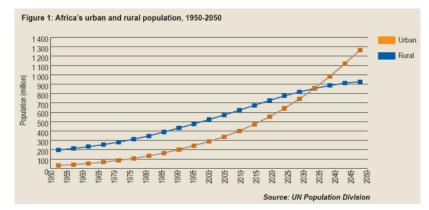

Figure 4: Africa's urban and rural Population, 1950 - 2050

Low agricultural productivity

Agriculture value added per worker (2013)

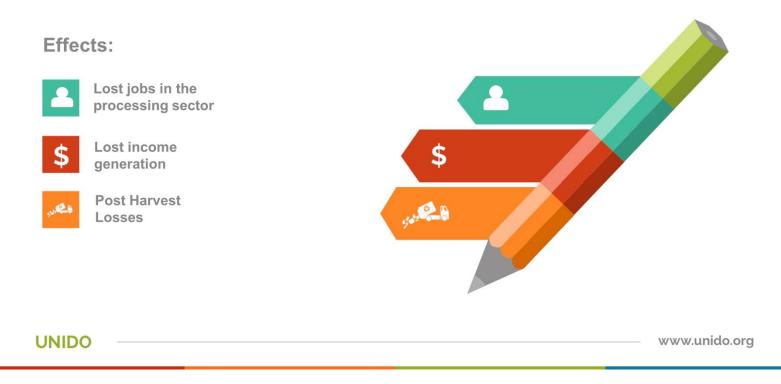

World average: \$1,201

Low level value addition

In least developed countries, only 38% of products are processed

High Post Harvest Losses

UNIDO

The Concept

Industry clusters: geographic concentrations of competing, complementary, or interdependent firms and industries that do business with each other and/or have common needs for talent, technology, and infrastructure. Agro = SEZ focus on agro processing

Business/Industry clusters is framed around four groups:

- 1. Geographical clusters that are identified by location
- 2. Sectoral clusters of businesses operating together from within the same commercial sector
- 3. Horizontal clusters between businesses at the level of shared resources (e.g. knowledge management)
- 4. Vertical clusters of businesses along a supply chain.

Agro Industrial Cluster is a concentration of producers, agro-industries, traders and other private and public actors engaged in the same industry and interconnecting and building value networks, either formally or informally, addressing common challenges and pursuing common opportunities (Galvez-Nogales 2010).

.....an extension of industrial clusters popularized by Michael Porter in 'The competitive advantage of nations' (1990).

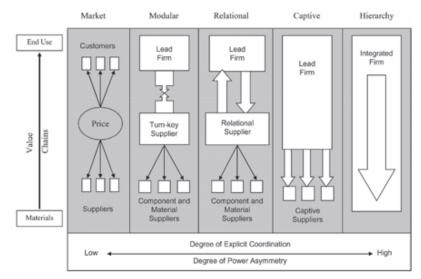

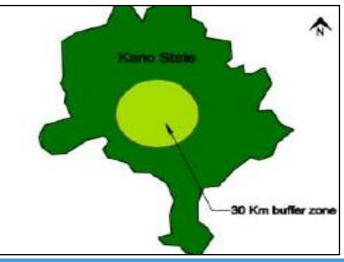

Agro Industrial Clusters

The concept is based on the relationships between raw material suppliers and end users and the differences in design are defined by the degree of explicit coordination and power asymmetry

Also known as:

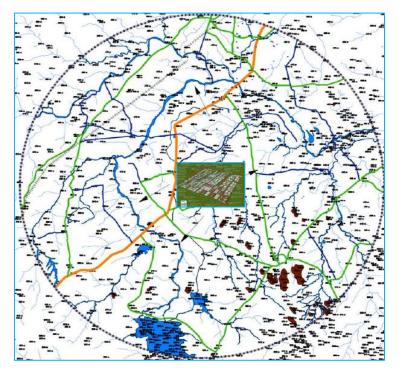

- Agroclusters
- Agropoles
- Agro-industrial park
- Agro food parks
- Agribusiness parks
- Mega Food Parks
- Special Economic Zones and Industrial Parks
 15000 across the world (UNIDO 2015)

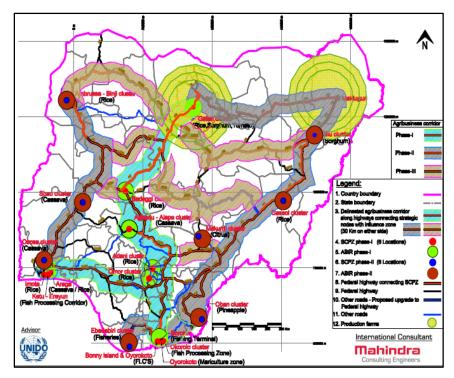

Models:

Centralized processing infrastructure in a farm production zone: Agro pole, Agro Industrial zone, SCPZ/ABIR, etc

Agro Industrial Corridors

The Greenhouse Industry	y of Spain (Traditional Industry)	THE GREENHOUSE INDUSTRY	Y OF THE NETHERLANDS
Approx. area of production:	40,000+ hectares	Approx. area of production:	12,000 hectares
Main production region/s:	Alicante Mucia	Main production region/s:	Westlands Aalsmeer district
	Almeria	Crops (vegetable):	Tomato, capsicum, eggplant, cucumber
Crops (vegetable):	Tomato, capsicum, cucumber	Crops (cutflower):	Rose, tulip, chrysanthemum, gerbera, camation
Key Features:	Plastic cladding Roof height 2 - 3 metres	Key Features:	Glass cladding Gutter height 4 - 5.5 metres
	Minimal ventilation Automatic irrigation control Predominantly soil production Little Heating, gas air heating Some Integrated Pest Management Some Recycled water		Automatic environmental control Automatic environmental control Automatic infration control Predominantly media based hydroponics Hydronic heating Integrated Pest Management Recycled water

Examples from around the world

Examples from around the world

Spain vegetable cluster covering an area of 40,000 + hectares spread across Alicante,

Mucia and Almeria regions

Dutch horticultural cluster for entire horticulture chain with an area of 12,000

hectares in Westlands, Aalsmeer district, Netherlands

Latin American agri clusters like

- Michoacan, Mexico
- Colima, Mexico
- Ceracruz, Mexico,
- Antioquia, Colombia
- Rio Grande Do Norte, Brazil
- Petrolina Juazeiro, Brazil
- North of Minas Gerais, Brazil
- Santa Catarina, Brazil
- Temperate Cluster, Argentina
- O'higgins, Chile
- Maule, Chile
- Colombia and Ecuador clusters

Western gap cluster in Thailand -35200 hectares							
Crop processing cluster in dong lieu, Vietnam							
Fish processing clusters around lake Victoria, Kenya – Regional							
Montana food cluster							
Foodprocessing cluster, Namibia							

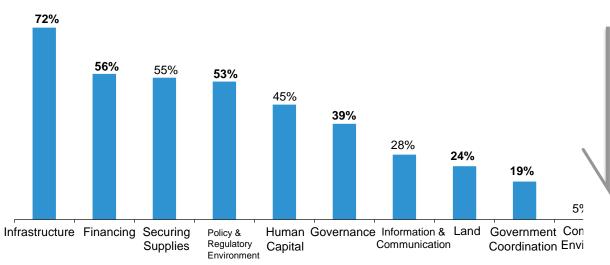

Key lessons from cluster development

	Several succe	ess stories can be	cited for cluster d	evelopment acros	ss the globe. :	
Large scale development	Economy of scale that facilitates the occupant industry to achieve the required threshold	synergy among the	State of the art infrastructure facilities	World class operation and maintenance strategies and support	Technology innovation driven development	Private sector playir a meaningful role in the entire developme cycle

From Comparative Advantage to Competitive Advantage

Supply side constraints in Agro industrial development

Addresses challenges to Agro-Industrialization simultaneously

Stakeholders and Beneficiaries

There are, basically, *five* sets of stakeholders to be involved from the beginning of the project:

- (1) local investors and industry associations;
- (2) international investors;
- (3) state (or province) and local governments;
- (4) selected (most relevant for the project) federal ministries; and
- (5) development partners.

Several Beneficiaries

- (1) Local Farmers/Farmer Coops
- (2) Local & International agro industry investors
- (3) Service Providers
- (4) State (or province) and local governments;
- (5) Government Ministries; Departments and Agencies
- (6) Site/Estate/Infrastructure Investors
- (7)etc

Development Strategy and Ownership

"Private sector led, Government enabled"

Develop enabling environment & framework - (policies, finance, land, incentives)
Provide connectivity to critical national public infrastructure such as land, roads, and energy

Regulatory Framework

 Financing and service support
 Develop market

- Develop market linkages to integrate smallholders, rural population, and women
- Capacity building

 Invest in modern agri-industrial processing, associated production & technology
 Invest in on-site

- Invest in on-site infrastructure and services
- Provide sustainable site management communities
- Build capacity and technical expertise

Agro Industrial Clusters:

..... a new agricultural investment framework

A key objective is to stimulate private sector investments to drive a marketled agricultural transformation

Shift agriculture from government controlled to private sector led

Transform the agricultural financial landscape

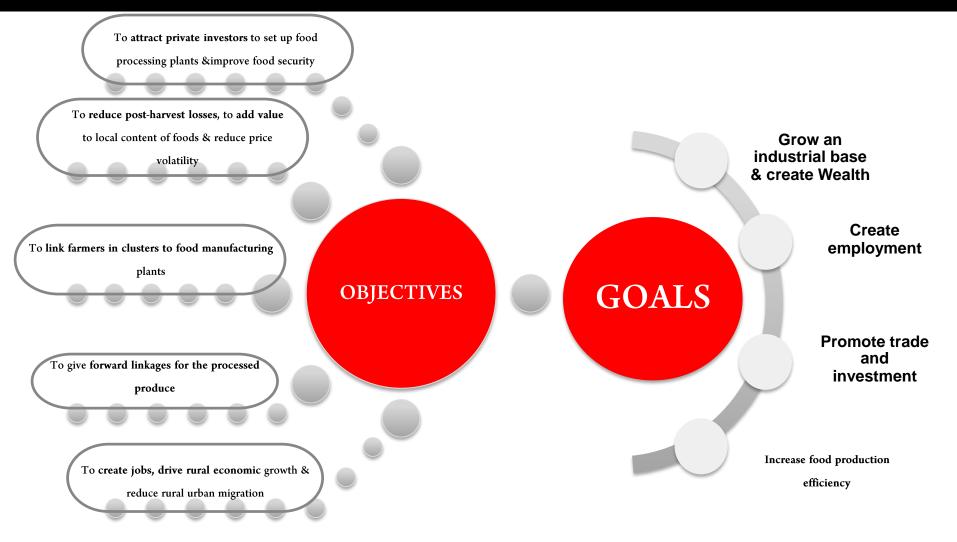

Channel investments in infrastructure and services

Strengthen the policy and investment climate

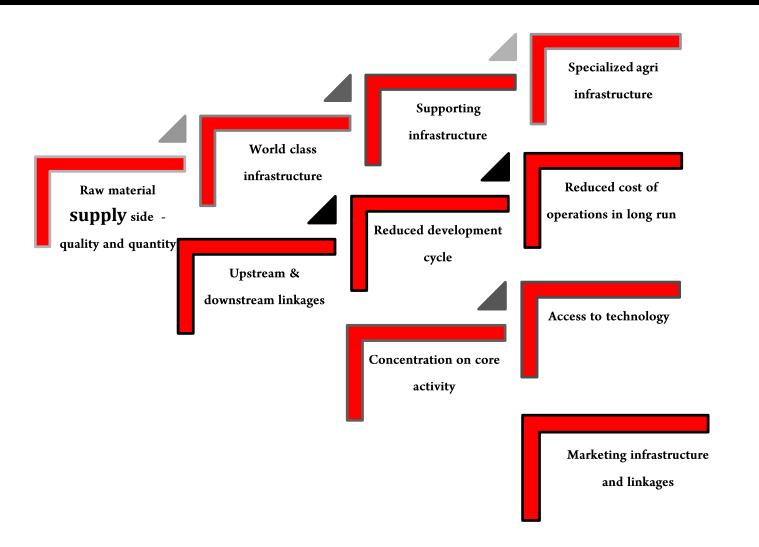

Goals and Objectives

Private Sector Expectations

Developing Agro Industrial Clusters: Key Documents

AIZ Policy

Provides the roadmap to guide the development, management and operation of the AIZ and will be used, alongside additional legal instruments –

Memorandum of Understanding, Tripartite Agreements, Standard Offer Agreements to be executed, as necessary, between the Federal, State Governments and Zone Investors

Legislative Bill for the establishment of the AIZ Law, the AIZ Institution/Authority

institutional arrangements, roles and responsibilities for the development and operation of the Agro Industrial Zone

Master Plan

Long-term planning document that establishes the framework and key elements of a site reflecting a clear vision created and adopted in an open process, defines a realistic plan for implementation, including a business case and subsequent approvals by public agencies

Master Plan: A Strategic Business Case

1	Agro clusters
2	• Agro & allied sector potential of the country
3	• Conceptualization and configuration of the agro industrial zone
4	Stakeholder mapping and consultation
5	• Vision and mission
6	• Land for the agro industril zone
7	• Zone definition
8	• Master planning of the core processing zone and configuration
9	• Infrastructure and facilities within the core processing zone
10	Infrastructure gap analysis for procurement zone
11	• Environmental and social assessment

12	• Agribusiness analysis and arrangements
13	Project cost
14	• Revenue drivers
15	• Means of finance, financial and investment model analysis
16	 Development strategy, project implementation structure, legal aspects and document templates
17	• Branding and marketing strategies
18	• Implementation schedule and micro level action plan
19	Risks mitigation plan
20	• SWOT analysis
21	Benefits and contributions

UNITED NATIONS INDUSTRIAL DEVELOPMENT ORGANIZATION

Key Investors

Require different financial products and mechanisms

Risks: Coordination and Continuity

Providing infrastructure involves the services under the scope of several Ministries (e.g., energy, transportation, communication, environment, science and technology etc.) and a very close inter ministerial coordination is required

- In project management coordination, there are, basically, two main problems to be avoided:
- (1) inter-governmental agency rivalry, which is a result of lack of coordination and even opposition between government agencies; and
- (2) inefficient decision-making processes, which is due to the fact that multiple reporting structures and reporting layers are expected to lead to inefficiencies and delays in the process of project implementation.
 - (3). Support at the highest level of Government& the Bank

Areas of possible technical support from UNIDO

- Technical support in Master plan design of Agro Industrial Zones
- Technical support to conduct feasibility studies (COMFAR) to establish the potential/profiles of the constituting agribusiness units (agroprocessing/value-addition)
- Policy development and institutional strengthening to support Agro Industrial Park concept
- Technical support to development of strategies for agricultural commercialisation / agro-industrial development & management capacity
- Capacity building and integration of value chain development strategies
- Capacity building in quality infrastructure, packaging, food safety and hygiene control → Good Manufacturing Practices (GMP)
- Capacity building in Investment and Technology promotion

Thank You
